

## Paleoclimatology

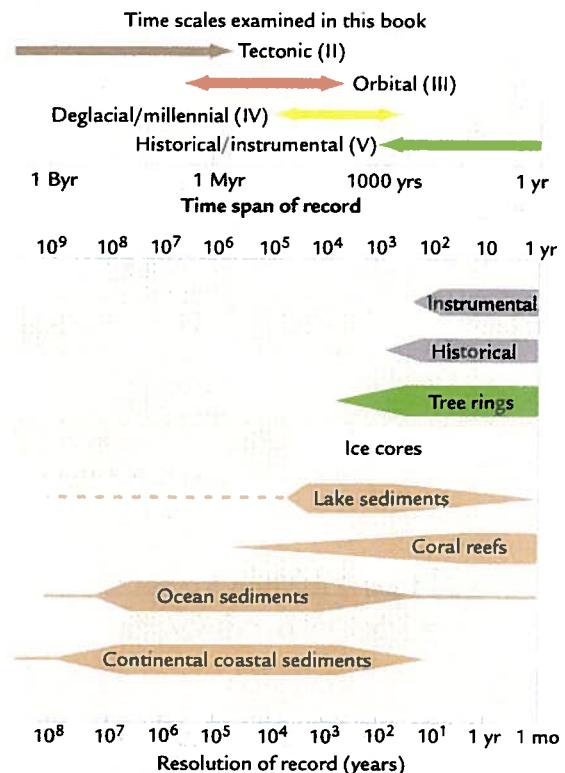

5 Billion to 2000 Years Ago  
FOR/GEOG 295 - 4 Sept. 2008

### Climate Archives:

- Geological
- Biological: Fossils & Pollen
- Cryological: Ice Cores  
 $\delta^{18}\text{O}$   
 $\delta\text{D}\%$
- Historical: Documents, etc.
- Biological: Tree-Rings
- Instrumental

Proxy: Using one thing in place of another...

Always better if 2, independent proxies agree

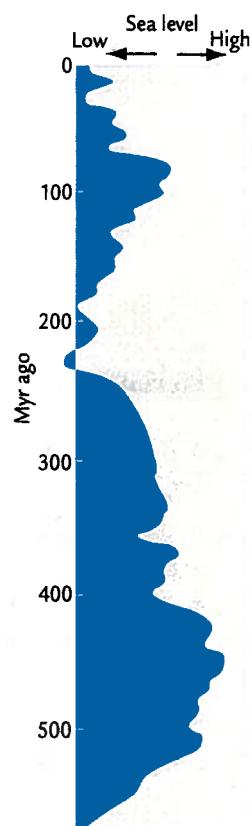

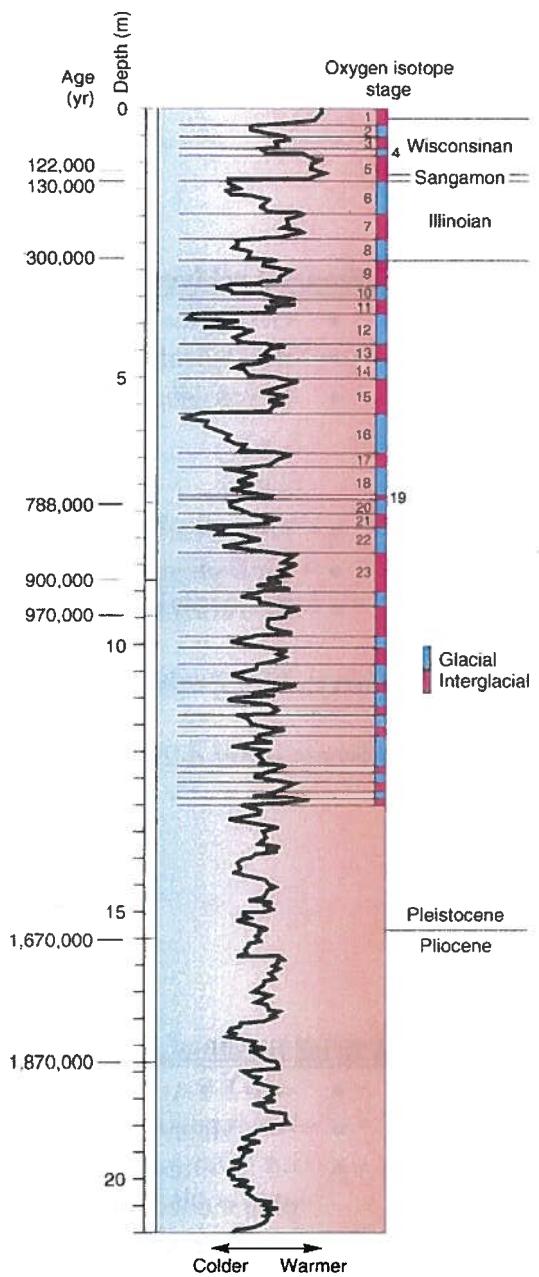

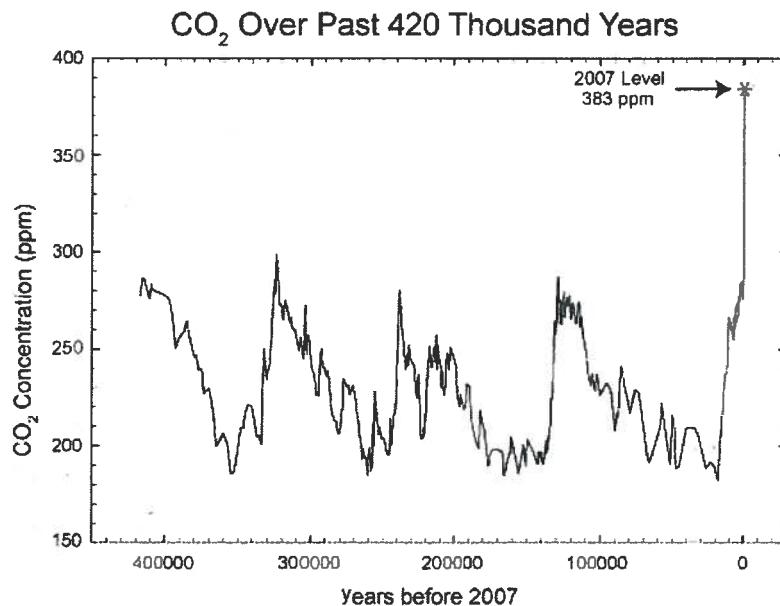

### A brief timeline of Earth's Evolution:

- ~4+ BYA: All blown away
- ~4: Magnetic field forms & atm held in place – no O<sub>2</sub>
- ~3.8: Out-gassing continues but liquid earth possible as planet cools below 100°C
- ~3.5 BYA: First life forms release O<sub>2</sub>
- ~500 MYA: O<sub>2</sub> levels high enough for ozone layer & plants & animals can now colonize land

### The Last 500 Million Years:

- Cretaceous
- Eocene
- Messinian Crisis

### The Last 2 Million Years:

- Milankovitch Cycles

### The Last 50,000 Years:

- Last Glacial Maximum
- Younger Dryas
- Anthropocene
